MOBİL ÇALIŞMA İSKELE SİSTEMİ

MOBILE SCAFFOLDING SYSTEM

RINGSCAFF-M 8 temel elemandan oluşan bir mobil iskele sistemidir. Hafif bileşenler, yüksek yerlerde sabit ve güçlü bir iskele yapısının kurulmasını kolaylaştırmakta, böylece çeşitli amaçlar için güvenli bir çalışma ortamı oluşturmaktadır. Tüm modül bileşenleri, TS EN 1004 Avrupa standartlarına uygun olarak geliştirilmiştir. Bu sistem ile TS EN 1004 yük sınıfı 3'e (2,00 kN/m²) uygun güvenli çalışma platformları oluşturmanız mümkündür. Korozyona karşı sistemi korumak için tüm bileşenler TS EN ISO 1461'e göre sıcak daldırma galvanizlidir.

RINGSCAFF-M is a mobile access solution consisting of 8 main components. Its lightweight elements facilitate the erection of a stable and robust scaffold structure at height, providing a safe working environment for various applications. All module components are designed and manufactured in accordance with TS EN 1004 European standards. With this system, it is possible to create safe working platforms in accordance with TS EN 1004 Load Class 3 (2.00 kN/m²). To ensure protection against corrosion, all components are hot dip galvanized in accordance with TS EN ISO 1461.

Ringscaff-M İskele Sistemi Montajı
Ringscaff-M Scaffolding System Assembly

1- Tekerlekler üzerine, özel flanşlı başlangıç elemanlarının cıvata ile bağlantısı yapılır.
2- Başlangıç elemanlarına yatay elemanlar bağlanır.
3- Flanşlı başlangıç elemanları üzerine flanşlı dikmeler yerleştirilir.
4- Yatay ve açılı çapraz elemanların montajı her iki doğrultuda yapılır. Böylece ilk sıra kurulum tamamlanır.
5- Metal platformlar teraziye alınan malzemenin üstüne yerleştirilir.
6- İkinci sıra kurulumdan sonra metal ve merdivenli platformlar, tekmelikler montajlanarak sistem yükseltilir. Kurulum projeye göre aynı sıralama ile devam eder.

1- Special flanged starter components are bolted onto the wheels with brake.
2- Horizontal members are connected to the starter components.
3- Flanged standards are placed onto the flanged starter components.
4- Horizontal and angular diagonal elements are installed in both directions. Thus, the first level erection is completed.
5- Steel platforms are placed on the leveled structure.
6- After the second level erection, steel and stair platforms, as well as toe boards, are installed and the system is raised. Installation continues in the same sequence according to the project.
